(Pharmacist Session)

12:00 p.m. – 1:00 p.m.

1 contact hour

***Faculty:***

Carly Sabat, PharmD

***Program Description:***

Patients with HIV now have life expectancies equal to the general US population when properly managed with combination antiretroviral therapy. With this life expectancy, there are more and more elderly patients living with HIV each year. Almost 10% of those infected with HIV have chronic kidney disease (CKD), complicating HIV regimen selection and dosing. The management of HIV in CKD is an area that pharmacists can play an important role in to reduce adverse events and further improve patient outcomes. At Cone Health, patients with HIV and CKD can be admitted to any service depending on their admitting diagnosis. Therefore, it is vital for all pharmacists to understand the potential complications and treatment for these patients to provide exceptional pharmaceutical care.

***Pharmacist Learning Objectives:***

*After attending this knowledge based program the pharmacist should be able to:*

1. Understand the incidence and prevalence of CKD in HIV-infected patients
2. Recognize potential complications and treatment considerations associated with HIV in CKD patients

3. Identify patients that would benefit from pharmacist involvement in the management of their CKD and HIV

### **Technician Learning Objectives:**

*After attending this knowledge based program the pharmacist technician should be able to:*

1. Recall common medications used in the treatment of HIV
2. Recognize the importance of accurate medication reconciliation in this patient population.

### **Location:**

Moses Cone Hospital, 1200 N Elm St , Greensboro, NC - NT A 1N 102

### **Target Audience:**

*Cone Health Pharmacists and technicians*

### **Continuing Education Credit for Pharmacists:**
