Program Description:

Heart failure costs the healthcare system roughly \$32 billion each year. Appropriate treatment of this disease improves outcomes and decreases the cost to the system. Patients with heart failure often have complicated regimens and pharmacists are uniquely positioned to improve the quality of care for these patients. Understanding the available medications and their place in therapy is imperative to achieving this patient centered approach.

Pharmacist Learning Objectives:

After attending this knowledge based program the pharmacist should be able to:

1. Identify pharmacy related measures to improve outcomes in heart failure patients.
2. Describe ways health outcomes can be improved through pharmacist involvement.
3. Recall evidence behind current standards of heart failure therapy.
4. Evaluate new/emerging medications and determine their places in therapy.

Technician Learning Objectives:

After attending this knowledge based program, the technician should be able to:

1. Recognize the importance of accurate medication reconciliation in heart failure patients.
2. Choose effective questions to ask a patient with heart failure.
